Internal metric property checks

finite nonnegative	**supported**
finite nonnegative (fair services disabled)	**supported**
finite nonnegative (baseline)	**supported**
finite nonnegative (robust)	**supported**
no services identity	**supported**
delay monotonicity	**supported**
carbon ledger separation	**supported**
canonical scenario count	**supported**
scale normalization	**supported**
benefit monotonicity	**supported**
delay behavior	**supported**
reference price monotonicity	**supported**

Use this as an internal correctness panel: no-services identity, nonnegativity, delay behavior, benefit monotonicity, and ledger separation.
